# Polyethylene Products

Client specifications for product quality are such that PDM extrudes its own polyethylene stock from selected raw materials. Prepared stock is then machined in-house by CNC machinery to the close tolerances demanded.

Because the size of permitted inclusion within products is so small, it has been necessary to develop special inspection equipment to internally illuminate the housings. That way trained staff are able to detect minute inclusions and ensure that every product is of the highest quality.

Extruding machine and tooling

Inclusion and void inspection equipment

A selection of polyethylene products

The experience PDM has gained over the years of working in the field of polyethylene products, coupled with its quality control procedures and working standards, has enabled the company to consistently manufacture products to the required specifications.

PDM Neptec manufactures all polyethylene products to the highest quality standards under BS EN ISO 9001:2000.

**If you require precision polyethylene products, perhaps in cable jointing or high voltage applications, please contact PDM to discuss your requirement.**
